Work rights: Temporary Graduate visa (subclass 485), full unrestricted work rights in Australia, valid to March 2029. No sponsorship required.

Available to start immediately. Australian Class C driver licence.

SUMMARY

Data analyst with a Master of Data Science from RMIT. I build Power BI dashboards and Excel reporting for maintenance and asset work, and I clean and check the data behind them with SQL and Python. Most recently on site in Sydney on a city wide asset audit, where I captured and condition rated 1,500+ assets, coordinated a three person inspection team and wrote the daily report to management. Earlier work built remaining life logic, replacement timing models and multi year capital forecasts for asset owners.

SKILLS

Reporting and BI: Power BI, DAX, Power Query, advanced Excel, dashboard design, KPI reporting, data storytelling, Tableau

Data: SQL, PostgreSQL, Python (pandas, NumPy), data cleaning, validation, reconciliation, ETL pipelines, exploratory analysis

Asset and works data: asset condition audit, condition rating (1 to 5), asset registry verification, asset hierarchy and classification, field data capture, GPS verified inspection, building services assets (fire, EWIS, emergency lighting, distribution boards, CCTV), public domain and civil assets, QA submission workflow

Planning and forecasting: remaining life logic based on condition, replacement timing, annual and cumulative capital forecasts, scenario testing, forecast reconciliation

Delivery: requirements gathering, process mapping, daily stand ups, field team coordination, progress consolidation and management reporting, scope rule definition, issue escalation, timesheet and resourcing coordination, UAT, documentation

Tools: Fulcrum field data collection, Power Apps, SharePoint, Google Apps Script, Google Earth measurement, Git and GitHub, Trello

EXPERIENCE

Business Analyst, SRP Global Consultancy

July 2026 to September 2026 | Melbourne VIC

Sydney NSW on site deployment, August 2026: asset audit, condition rating and field team coordination on a city wide asset verification programme.

- Captured and verified 1,500+ asset records over 11 field days, about 143 a day, across heritage commercial buildings, a retail centre, hotel and public amenities, plant rooms, pedestrian footbridges, harbourside parks, playgrounds and public domain areas.
- Rated the condition of each asset on a 1 to 5 scale across building services and public assets: CCTV and security devices, street and external lighting, smoke detection, EWIS and emergency lighting, fire extinguishers and hose reels, distribution boards, handrails, pavements, planter walls, benches, lawns, trees, wharf and pontoon structures.
- Wrote the daily progress report to management for the whole engagement: areas finished, asset volumes, blockers, resourcing changes and open scope questions.
- Brought 4,900+ reported captures from the team into a daily progress view, tracked each inspector against their assigned areas, and showed where the numbers needed checking before they were reported upward.
- Turned the client scope of works briefing into a 17 rule field instruction set so all three inspectors classified assets the same way from day one.
- Set the rule for working against the existing asset register: confirm the recorded asset on site first, create a new record only where there is a real extra asset, and log defects as separate items.
- Found asset records left in draft that were at risk of automatic deletion and fixed them the same day, which saved a full day of field data.
- Flagged that combined team counts included overlap, and asked for unique totals from the system before they were treated as final, so management reporting stayed honest.
- Ran daily morning stand ups with the site supervisor, confirmed site allocations and split building levels so the team did not cover the same ground twice.

Platform and reporting work, Melbourne

- Built Power BI dashboards and Python and SQL pipelines for asset management, healthcare and facilities reporting, including condition based lifecycle logic and multi year capital forecasting.
- Built and launched a work order and contractor management platform end to end, covering work order lifecycle, site attendance with location and photo evidence, and automated PDF compliance reports.
- Wrote the technical documentation and handover material and supported the first group of external users.

Data Analyst (Intern), SRP Global Consultancy

April 2026 to July 2026 | Melbourne VIC

- Cleaned, standardised and checked large asset register datasets with sparse and unreliable fields, and wrote down the cleaning decisions column by column.
- Built remaining life logic based on condition and replacement timing models, then built annual and cumulative capital forecast tables and tested different spread assumptions.
- Built Power BI models with Power Query transformations and DAX measures, with filters by site, facility, area, category and asset element.
- Checked internally built forecasts against external BI outputs and looked into the differences in replacement years and forecast spread.
- Used Python for validation and quality checks across large operational datasets.
- Wrote down the assumptions and limits behind the reporting given to management, so the figures were read with their uncertainty.

Data Science Intern, Woofya

July 2025 to November 2025 | Melbourne VIC, hybrid. Work featured at VET Expo 2025.

- Built Python and SQL pipelines that pulled data from API and database sources into reporting ready datasets.
- Cleaned, validated and structured raw operational records, which made the dashboards more reliable.
- Built dashboard and reporting screens so stakeholders could see operational patterns and act on them.

SELECTED PROJECTS

Sydney Asset Verification and Condition Audit Programme

- On site work across a registry of about 190 locations covering heritage commercial buildings, retail, hotel amenities, plant rooms, footbridges, harbourside parks and public domain. Captured 1,500+ condition rated records over 11 field days, coordinated a three inspector team, and drove the data quality controls: draft record fixes, individual inspector accounts for correct authorship, location hierarchy fixes, and reconciliation of reported counts against system records.

Asset Lifecycle and Capital Forecasting Reporting

- Power BI, DAX, Power Query, Python, SQL. Reporting for asset management, healthcare and facilities operations: data cleaning and validation, condition based remaining life logic, multi year capital forecasting checked against external BI outputs, and dashboards with multi level filtering.

RBA Cash Rate Dashboard

- Power BI dashboard on Australian cash rate trends from 1990 to now, using DAX time intelligence measures. Public: github.com/Hemanth-Gowda23/RBA-Cash-Rate-Dashboard

EDUCATION

Master of Data Science, RMIT University, Melbourne

February 2024 to December 2025

Bachelor of Engineering, Information Science, Atria Institute of Technology, Bengaluru

August 2019 to June 2023

CERTIFICATIONS AND RECOGNITION

- Microsoft PL-300 Power BI Data Analyst, in progress, 2026
- Deloitte Australia Data Analytics Job Simulation, Forage, August 2025
- McKinsey Forward Program, 2025
- Smart Sprouts: Fuzzy Logic Driven IoT Based Smart Water Management System for Vertical Farming, IEEE, October 2023, co-author
- KSCST 46th Series Student Project Programme, project sanctioned and recognised, Karnataka State Council for Science and Technology, 2022 to 2023
