

HEMANTH RANGASWAMY

Data and BI Analyst | Business Analyst | Python, SQL, Power BI, REST APIs

Melbourne VIC | +61 422 537 575 | hemanthkvt9@gmail.com

linkedin.com/in/hemanthgowda23 | github.com/Hemanth-Gowda23 | hemanth-gowda23.github.io/Portfolio_Gowda23

Work rights: Temporary Graduate visa (subclass 485), full working rights, valid to March 2029. No sponsorship required.

PROFESSIONAL SUMMARY

Data and BI analyst with a Master of Data Science from RMIT, working across analytics, data engineering and business analysis. Builds Power BI models with Power Query and DAX, Python and SQL pipelines against PostgreSQL, and the validation and reconciliation work that makes reporting trustworthy. Translates operational process into working systems (requirements, workflow design, role and permission models, UAT and documentation) and then builds them: took a multi-tenant B2B work order platform from empty repository to public launch as sole developer. Strongest where messy operational data has to become reporting people will act on.

TECHNICAL SKILLS

BI and Reporting: Power BI, DAX, Power Query, dashboard design, KPI reporting, data storytelling, Excel, Tableau

Data and Databases: SQL, PostgreSQL, Python (pandas, NumPy), R, data cleaning, validation, reconciliation, ETL pipelines, exploratory data analysis

Engineering: React, Node.js, Express, Prisma ORM, REST API design, JavaScript, Java, PHP, Chart.js

Platform and DevOps: Git, GitHub, GitHub Actions (CI/CD), Cloudflare Pages, Render, database migrations, secrets management

Low-code and Integration: Power Apps, SharePoint, Google Apps Script, Firebase, Directus API

Delivery: Requirements elicitation, process mapping, user stories, role-based access analysis, UAT, defect tracking, technical documentation, Agile

PROFESSIONAL EXPERIENCE

Business Analyst, SRP Global Consultancy

July 2026 to Present | Melbourne VIC

- Sole developer and analyst on a multi-tenant work order and contractor management platform, taken from empty repository to public launch.
- Translated operational workflows for administrator, manager, technician, tenant and client users into role-based screens, data flows and reporting features.
- Designed and built the platform end to end: React front end, Node and Express REST API, PostgreSQL with a 71-model relational schema, launched to production on schedule.
- Built role-based access across five distinct user types, including a restricted external role with enforced separation from internal financial data.
- Built Power BI dashboards and Python and SQL pipelines for asset management, healthcare and facilities reporting, including condition-based lifecycle logic and multi-year capital forecasting.
- Developed automated audit-grade PDF reporting assembling attendance, location capture, photographic evidence and a full document chain into a single compliance record.
- Built and maintained the deployment pipeline across Cloudflare Pages, Render and managed PostgreSQL, with a controlled migration process against a live production database.
- Integrated a large language model into the platform with server-side key handling, stateless request design and feature-flag gating.
- Produced technical documentation and handover material, and supported onboarding for the first cohort of external users.

Data Analyst (Intern), SRP Global Consultancy

April 2026 to July 2026 | Melbourne VIC

- Cleaned, standardised and validated large asset-register datasets, investigating sparse and unreliable fields and documenting cleaning decisions column by column.
- Developed condition-based remaining-life logic and replacement-timing models, then built annual and cumulative capital forecast tables and tested alternative spread assumptions.
- Built Power BI data models with Power Query transformations and DAX measures, filterable by site, facility, area, category and asset element.
- Reconciled internally built forecasts against external BI outputs, investigating differences in replacement years and forecast distribution.
- Used Python for data validation and quality checks across large operational datasets.
- Documented assumptions, limitations and recommended next steps for decision-support reporting delivered to management.

Data Science Intern, Woofya

July 2025 to November 2025 | Melbourne VIC, Hybrid

- Built API-driven Python and SQL pipelines aggregating pet-health and veterinary workflow data from Directus API and Firebase sources into reporting-ready datasets.
- Cleaned, validated and structured raw operational records, improving dashboard reliability and the quality of insight delivered to stakeholders.
- Designed dashboard and reporting interfaces in PHP and Chart.js so stakeholders could see operational patterns and act on them.
- Worked directly with the founder in agile cycles to ship production analytics improvements. Work featured at VET Expo 2025.

Web Development Intern, Thoughtsstream Innovation Pvt Ltd

July 2022 to August 2022 | Bengaluru, India

- Enhanced HTML, CSS and Bootstrap front-end components for a web-based SaaS platform and supported CRM workflow updates.

SELECTED PROJECTS

Automated Multi-Source ETL Pipeline with Skill-Based Ranking Engine

Python | GitHub Actions | REST APIs

Production pipeline ingesting listings from public APIs, deduplicating with persistent state management, scoring against a configurable 24-keyword profile, and delivering ranked HTML digests by email. Scheduled twice daily on GitHub Actions with all credentials held in GitHub Secrets.

RBA Cash Rate Dashboard

Power BI | DAX time intelligence | financial KPI reporting

Interactive dashboard analysing Australian cash rate trends from 1990 to present, using DAX time-intelligence measures and visual storytelling for monetary policy insight. Public repository: github.com/Hemanth-Gowda23/RBA-Cash-Rate-Dashboard

Time Ledger, Attendance and Field Reporting Application

Power Apps | SharePoint | Google Apps Script

Internal MVP replacing manual attendance tracking. SharePoint data structure, Power Apps prototype and web version, GPS coordinate and map-link capture, kilometres-travelled reporting, validation preventing duplicate clock-ins, and role-restricted reporting so employees see only their own records.

Smart Sprouts, IoT Smart Water Management for Vertical Farming

Python | Raspberry Pi | fuzzy logic | sensor data capture

IEEE-published system combining vertical farming with fuzzy-logic irrigation control and adaptive sensor-driven controls, designed to maximise yield while minimising land and water use.

EDUCATION

Master of Data Science, RMIT University, Melbourne

February 2024 to December 2025

Bachelor of Engineering, Information Science, Atria Institute of Technology, Bengaluru

August 2019 to June 2023

CERTIFICATIONS

- Microsoft PL-300: Power BI Data Analyst, in progress, 2026
- Deloitte Australia Data Analytics Job Simulation, Forage, August 2025
- McKinsey Forward Program, 2025

PUBLICATIONS AND RECOGNITION

- Smart Sprouts: Fuzzy Logic-Driven IoT-Based Smart Water Management System for Vertical Farming, IEEE, October 2023 (co-author)
- KSCST 46th Series Student Project Programme, project sanctioned and recognised, Karnataka State Council for Science and Technology, 2022 to 2023
- Woofya analytics work featured at VET Expo 2025

LANGUAGES

English (full professional), Kannada (native), Hindi (working)
